Benjamin Rubin is a cantankerous old writer, whisky aficionado and pedant, still basking in the reflected glory of long-ago success. Martin Wegner is a rising young literary star, heralded as 'the voice of his generation'. When Martin is given the opportunity to develop his new play under the mentorship of his idol, the writers meet in a dilapidated art-nouveau villa somewhere in the German countryside. Two massive egos are set on a collision course in this perceptive and compelling comedy about art and artists and the legacy of fame. Christopher Hampton's translation of *The Mentor* by Daniel Kehlmann premiered at the Ustinov Studio, Theatre Royal Bath, in April 2017.

10-Day Green Smoothie Cleanse Springer

Part green-lifestyle guide, part popular science, How Bad Are

Bananas? is the first book to provide the information we need to make carbon-savvy purchases and informed lifestyle choices and to build carbon considerations into our everyday thinking. The book puts our decisions into perspective with entries for the big things (the World Cup, volcanic eruptions, the Iraq war) as well as the small (email, ironing, a glass of beer). And it covers the range from birth (the carbon footprint of having a child) to death (the carbon impact of cremation). Packed full of surprises — a plastic bag has the smallest footprint of any item listed, while a block of cheese is bad news — the book continuously informs, delights, and engages the reader. Solidly researched and referenced, the easily digestible figures, statistics, charts, and graphs (including a section on the carbon footprint of various foods) will encourage discussion and help people to make up their own minds about their consumer choices.

Helping Them to Help Themselves Harper Collins

Field to Palette: Dialogues on Soil and Art in the Anthropocene is an investigation of the cultural meanings, representations, and values of soil in a time of planetary change. The book offers critical reflections on some of the most challenging environmental problems of our time, including land take, groundwater pollution, desertification, and biodiversity loss. At the same time, the book celebrates diverse forms of resilience in the face of such challenges, beginning with its title as a way of honoring locally controlled food production methods championed by "field to plate" movements worldwide. By focusing on concepts of soil functionality, the book weaves together different disciplinary perspectives in a collection of dialogue texts between artists and scientists, interviews by the editors and invited curators, essays and poems by earth scientists and humanities scholars, soil recipes, maps, and DIY experiments. With contributions from over 100 internationally renowned researchers and practitioners, Field to Palette presents a set of visual methodologies and worldviews

that expand our understanding of soil and encourage readers to develop their own interpretations of the ground beneath our feet. *Night Falls on the Berlin of the Roaring Twenties* Simon and Schuster

Many interesting and important results on stochastic scheduling problems have been developed in recent years, with the aid of probability theory. This book provides a comprehensive and unified coverage of studies in stochastic scheduling. The objective is two-fold: (i) to summarize the elementary models and results in stochastic scheduling, so as to offer an entry-level reading material for students to learn and understand the fundamentals of this area and (ii) to include in details the latest developments and research topics on stochastic scheduling, so as to provide a useful reference for researchers and practitioners in this area. *Optimal Stochastic Scheduling* is organized into two parts: Chapters 1-4 cover fundamental models and results, whereas Chapters 5-10 elaborate on more advanced topics. More specifically, Chapter 1 provides the relevant basic theory of probability and then introduces the basic concepts and notation of stochastic scheduling. In Chapters 2 and 3, the authors review well-established models and scheduling policies, under regular and irregular performance measures, respectively. Chapter 4 describes models with stochastic machine breakdowns. Chapters 5 and 6 introduce, respectively, the optimal stopping problems and the multi-armed bandit processes, which are necessary for studies of more advanced subjects in subsequent chapters. Chapter 7 is focused on optimal dynamic policies, which allow adjustments of policies based on up-to-date information. Chapter 8 describes stochastic scheduling with incomplete information in the sense that the probability distributions of random variables contain unknown parameters, which can however be estimated progressively according to updated information. Chapter 9 is devoted to the situation where the processing time of a job depends on the time when it is started. Lastly, in Chapter 10 the authors look at several recent models beyond those surveyed in the previous chapters.

Referred to as the "Grand Prix of epidemiology" by The New York Times, this study examines more than 350 variables of health and nutrition with surveys from 6,500 adults in more than 2,500

counties across China and Taiwan, and conclusively demonstrates the link between nutrition and heart disease, diabetes, and cancer. While revealing that proper nutrition can have a dramatic effect on reducing and reversing these ailments as well as curbing obesity, this text calls into question the practices of many of the current dietary programs, such as the Atkins diet, that are widely popular in the West. The politics of nutrition and the impact of special interest groups in the creation and dissemination of public information are also discussed.

The first course of the International School on Physics with Low Energy Antiprotons was held in Erice, Sicily at the Ettore Majorana Centre for Scientific Culture, from September 26 to October 3, 1986. The purpose of this School is to review the physics accessible to experiments using low energy antiprotons, in view of the new era of the CERN LEAR ring opened by the upgrade of the antiproton source at CERN (ACOL). In 1986 the first course covered topics related to fundamental symmetries. These Proceedings contain both the tutorial lectures and the various contributions presented during the School by the participants. The contributions have been organized in six sections. The first section is devoted to gravitation, a particularly "hot" topic in view of recent speculations about deviations from Newton's and Einstein's theories. Section II covers various problems related to the matter-antimatter symmetries such as comparison of the proton and antiproton, inertial masses or spectroscopy of antihydrogen or other antiprotonic atoms. CP and CPT violations in weak interaction are presented in Section III. The test of symmetries in atomic physics experiments and the strong CP

problem are covered in Section IV. Section V groups contributions related to high precision measurements of simple systems like protonium, muonium or the anomalous moment of the muon. The last section is devoted to the experimental challenge of polarizing antiproton beams.

From an elite Special Operations physical trainer, an ingeniously simple, rapid-results, do-anywhere program for getting into amazing shape For men and women of all athletic abilities! As the demand for Special Operations military forces has grown over the last decade, elite trainer Mark Lauren has been at the front lines of preparing nearly one thousand soldiers, getting them lean and strong in record time. Now, for regular Joes and Janes, he shares the secret to his amazingly effective regimen—simple exercises that require nothing more than the resistance of your own bodyweight to help you reach the pinnacle of fitness and look better than ever before. Armed with Mark Lauren's motivation techniques, expert training, and nutrition advice, you'll see rapid results by working out just thirty minutes a day, four times a week—whether in your living room, yard, garage, hotel room, or office. Lauren's exercises build more metabolism-enhancing muscle than weightlifting, burn more fat than aerobics, and are safer than both, since bodyweight exercises develop balance and stability and therefore help prevent injuries. Choose your workout level—Basic, 1st Class, Master Class, and Chief Class—and get started, following the clear instructions for 125 exercises that work every muscle from your neck to your ankles. Forget about gym memberships, free weights, and infomercial contraptions. They are all poor substitutes for the world's most advanced fitness machine, the one thing you are never without: your own body.

From one of America's most renowned film scholars: a revelatory, perceptive, and highly readable look at the greatest silent film stars -- not those few who are fully appreciated and understood, like Chaplin, Keaton, Gish, and Garbo, but those who have been misperceived, unfairly dismissed, or forgotten. Here is Valentino, "the Sheik," who was hardly the effeminate lounge lizard he's been branded as; Mary Pickford, who couldn't have been further from the adorable little creature with golden ringlets that was her film persona; Marion Davies, unfairly pilloried in *Citizen Kane*; the original "Phantom" and "Hunchback," Lon Chaney; the beautiful Talmadge sisters, Norma and Constance. Here are the great divas, Pola Negri and Gloria Swanson; the great flappers, Colleen Moore and Clara Bow; the great cowboys, William S. Hart and Tom Mix; and the great lover, John Gilbert. Here, too, is the quintessential slapstick comedienne, Mabel Normand, with her Keystone Kops; the quintessential all-American hero, Douglas

Fairbanks; and, of course, the quintessential all-American dog, Rin-Tin-Tin. This is the first book to anatomize the major silent players, reconstruct their careers, and give us a sense of what those films, those stars, and that Hollywood were all about. An absolutely essential text for anyone seriously interested in movies, and, with more than three hundred photographs, as much a treat to look at as it is to read.

Suffering from chronic illness and unable to get satisfactory results from doctors, husband and wife scientists Paul and Shou-Ching Jaminet took an intensely personal interest in health and nutrition. They embarked on five years of rigorous research. What they found changed their lives— and the lives of thousands of their readers. In *Perfect Health Diet*, the Jaminets explain in layman's terms how anyone can regain health and lose weight by optimizing nutrition, detoxifying the diet, and supporting healthy immune function. They show how toxic, nutrient-poor diets sabotage health, and how on a healthy diet, diseases often spontaneously resolve. *Perfect Health Diet* tells you exactly how to optimize health and make weight loss effortless with a clear, balanced, and scientifically proven plan to change the way you eat—and feel—forever!
