 Three ancient scrolls beckon high school student Aidan Thomas to enter a realm of knights, kings, and unusual creatures, but he must rely on instinct and his latent athletic ability to deal with the terror, tempest, and treason in this new world.
Cataract Healing Book Simon and Schuster
 Vampires . . . they ache, they love, they thirst for the forbidden. They are your friends and lovers, and your worst fears. "A major new voice in horror fiction . . . an electric style and no shortage of nerve."—Booklist At a club in Missing Mile, N.C., the children of the night gather, dressed in black, look for acceptance. Among them are Ghost, who sees what others do not; Ann, longing for love; and Jason, whose real name is Nothing, newly awakened to an ancient, deathless truth about his father, and himself. Others are coming to Missing Mile tonight. Three beautiful, hip vagabonds—Molochai, Twig, and the seductive Zillah, whose eyes are as green as limes—are on their own lost journey, slaking their ancient thirst for blood, looking for supple young flesh. They find it in Nothing and Ann, leading them on a mad, illicit road trip south to New Orleans. Over miles of dark highway, Ghost pursues, his powers guiding him on a journey to reach his destiny, to save Ann from her new companions, to save Nothing from himself. . . . "An important and original work . . . a gritty, highly literate blend of brutality and sentiment, hope and despair."—Science Fiction Chronicle
So You've Got A Cataract? Springer Nature
 Eye Was There is created specifically for any person who is considering having an eye surgically removed or is coping with the loss of an eye. It is also created for that persons caretakers, family members and friends. There are limited sources of information, outside of a doctors office, from which a patient can learn about what to expect before, during, and after the surgery to remove an eye. The doctor or the doctors staff might not have the time to handle the variety of questions that are commonly asked. Many of the questions arise after the patient has left the doctors office. Eye Was There is intended to serve as a source of information regarding the preoperative, surgical and postoperative options surrounding the loss of an eye. It explains the most common surgical procedures performed to remove an eye and the potential complications that can occur after surgery. It details some of the medical conditions leading up to the removal of an eye. It describes the emotional and psychological steps that are experienced when dealing with the loss of an eye. It contains historic and current information on the manufacturing

and fabrication of artificial eyes and orbital prostheses. It provides instruction and advice regarding the care and handling of the artificial eyes and orbital prostheses that are worn after surgery. The book is meant to give a positive perspective of dealing with life after the loss of an eye.

 Are you going blind? I was. Slowly. One morning I woke up and couldn't read labels anymore. My doctor told me it was a normal part of getting older. But I'm stubborn. I thought there must be another way, but no one seemed to have one. So I finally found my own way. I've completely changed how I see my eyes, I've improved my vision, and I'd like to share what I found with you. I would never claim that my results will be your results, so please don't expect that reading this book will magically improve your eyes. Applying what you read may help or it may not. But doing nothing different is likely to make your eyes worse over time. Dr. Christopher Maloney woke up one day and couldn't read labels without taking off his glasses. He asked his eye doctor what it was, and got a shrug. It was just part of getting older. Unwilling to accept eventual blindness, Dr. Maloney researched. He started off convinced eyesight was genetic, and ended up convinced it isn't genetic at all. Along the way, Dr. Maloney found a secret pandemic that doesn't make the nightly news. We're not going blind as we age, we're going blind as a planet. The developed countries of the world are going blind at an astronomical rate, and young people are going blind long before old age can be blamed. Digging deeper, Dr. Maloney found a conspiracy, complete with doctored data, a madman, and an ongoing prejudice against

change so pervasive very few are even questioning the conventional wisdom. All Dr. Maloney wanted to find was a way for him to read grocery store labels without taking off his glasses. What he found instead was a fundamental flaw in the medical model of how we think about our eyesight. Join him as he explores hundreds of studies and explains them in simple language. Dr. Maloney can give you the evidence, and you need to be the judge and jury about if what he's saying might affect your eyes.

Caring for Your Baby and Young Child JGF Press

The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

Combining the benefits of video training and book learning, Tony Northrup's Lightroom 5 Video Book gives you over 12 hours of video and 250 pages of written content. When you can set aside the time, start the videos on a smartphone, tablet, or PC, and work alongside Tony & Chelsea in Lightroom. When you'd rather learn away from your PC, or you just want to quickly look something up, search the eBook or flip through the paperback book to find the information you need. Similar video training costs well over \$120 or more, or worse, requires you to pay a monthly membership fee that might cost you thousands. Similar books cost over twice this amount. You also get over 150 Lightroom presets, which usually cost more than \$100, and access to our private Lightroom group on Facebook so you can ask questions and get feedback. Tony covers every aspect of Lightroom in-depth, but structures his teaching so that both beginner and advanced photographers can learn as efficiently as possible. If you just want a quick start, you can simply watch the first video or read the first chapter and you'll be organizing and editing your pictures in less than an hour. If you want to know more about a specific feature, switch to that video or flip to that chapter in the eBook. If you want to know everything about Lightroom, watch the videos and read the book from start-to-finish.

Eyes are one of the most necessary sense organs, which let us enjoy the outer world, see and experience the everyday events. Eyesight is vital for everyday activities and thus caring for the eyes is a matter of supreme importance. But many are born with eye problems, or develop them at a later stage. These eye problems can be refractive vision problems like myopia, presbyopia, astigmatism and many more. Some even face cataracts, corneal ulcers and problems. Many people around the world depend on spectacles, contact lenses and other vision correcting systems for optimal vision. But, recently many people are preaching the goodness of eye exercises and claiming that these exercises, when administered in the right way and followed through, can reduce and even heal eye problems. Many people are spending their hard-earned money on these eye exercise programs and books that claim to help you lose your spectacles and heal your eyes naturally. Cataract eye surgery is a life changing occasion for many people. Cataracts are common and although they are not life threatening they can be very difficult to live with. Everyday tasks can become challenging and activities like sports, craft work, reading or even driving can often no longer be carried out. This can have a seriously detrimental effect on a person's life. They often begin to develop when people are in their 40's or 50's but are often undiagnosed as they show no signs they

are present at first. Over time however they expand and grow across the eye. As the cloudiness gets worse so does a person's eyesight. What starts as a mild blurriness can lead to virtual blindness. There are many symptoms that accompany cataracts. Blurred or double vision is very common. Poor night time vision is almost certainly a guarantee. Often eyes become very sensitive to bright lights and the appearance of halos around light bulbs or other lights is common. As the lens of the eye continues to be affected by cataracts it can even start to change colour. When eyesight is as bad as this, certain activities like driving becomes impossible. With poor quality vision driving becomes simply too dangerous to do. Reading can also become difficult to do. Whether it is small print in a newspaper, books or magazines, the eyes just cannot focus on the detail in the way they could before the development of the cataract. Many everyday activities and tasks become extremely difficult to do which can be very frustrating. Thousands of people have been helped with cataract surgery. Refractive lens exchange involves taking the existing cloudy lens of the eye away and replacing it with an artificial one. Surgery restores eyesight almost instantly. Many people who have had to endure gradually worsening sight can suddenly see clearly again, drive a car, read a newspaper and do all the things that had become virtually impossible. Refractive lens exchange is very quick and it takes just a couple of days to recover from. It doesn't hurt at all and eye sight returns to its youthful state. When the eyes become badly affected by cataracts, everyday life can become frustrating and difficult. Even simple things become difficult and take a long time to do with poor eyesight. Having a simple procedure done to correct the problem can bring a new lease of life to anyone suffering from cataracts. Thousands of people have undergone treatment and been totally amazed at the results. Cataract removal can transform lives. There are few possible intraocular lens implant complications to worry about too when it comes to cataract eye surgery. The procedure is safe and the recovery period is very short. If your eyes have developed cataracts there is help available and you don't have to experience gradually diminishing eyesight. Click the button below to place an ORDER.

Aging and Your Eyes Bonnier Publishing Ltd.

Good vision is more than the ability to see 20/20 on an eye chart. Any vision problem is a message alerting us to an unbalanced inner state. Eyeglasses, medications, and surgery may correct poor vision but they cannot correct this inner imbalance. In The Power Behind Your Eyes, Robert-Michael Kaplan presents Integrated Vision Therapy a comprehensive daily program that can actually improve as well as treat the inner causes of poor vision. More comprehensive than other vision care techniques, Integrated Vision Therapy takes a holistic approach to identifying the causes of vision problems and developing noninvasive, natural strategies for treatment, including clear, easy-to-follow exercises, diets, and changes in daily habits.
