Shark Biology and Conservation Chelsea House Publications
Whale sharks are the largest of all fishes, fascinating for comparative studies of all manner of biological fields, including functional anatomy, growth, metabolism, movement ecology, behavior and physiology. These gentle ocean giants have captured the interest of scientists and the imagination of the public, yet their future is uncertain. The conservation status of whale sharks was upgraded to Endangered on the IUCN Red List and the species faces a range of intense threats from human activities. Can these iconic living animals, who have survived for millions of years, survive us? Written by the world's leading experts in whale shark biology, ecology, and conservation, *Whale Sharks: Biology, Ecology and Conservation* is the first definitive volume about the world's biggest fish. Chapters include discussions of satellite-linked tags, used to track whale shark movements; genetic sequencing, to examine evolutionary adaptations; even the use of underwater ultrasound units to investigate the species' reproduction. The editors hope that by collating what is known, they can make it easier for future researchers, conservationists, and resource managers to fill some of the remaining knowledge gaps, and provide the information they need to join the team. As you work your way through this book, we hope that you will develop a sense of awe and marvel at all of our good fortune to share the ocean, and the planet, with this utterly extraordinary species.

The Shark Attack Files Macmillan

Feed your fascination with sharks! This complete resource enlightens readers on the biology, ecology, and behavior of sharks with approachable explanations and more than 250 stunning color illustrations. Studies of shark biology have flourished over the last several decades. An explosion of new research methods is leading to a fascinating era of oceanic discovery. *Shark Biology and Conservation* is an up-to-date, comprehensive overview of the diversity, evolution, ecology, behavior, physiology, anatomy, and conservation of sharks. Written in a style that is detailed but not intimidating by world-renowned shark specialists Dan Abel and Dean Grubbs, it relays numerous stories and insights from their exciting experiences in the field. While explaining scientific concepts in terms that non-specialists and students can understand, Abel and Grubbs reveal secrets that will illuminate even the experts. The text provides readers with a robust and wide range of essential knowledge as it

- introduces emerging as well as traditional techniques for classifying sharks, understanding their behavior, and unraveling

the mysteries of their evolution; • draws on both established shark science and the latest breakthroughs in the field, from molecular approaches to tracking technologies; • highlights the often-neglected yet fascinating subject of shark physiology, including heart function, sensory biology, digestion, metabolic performance, and reproduction; • addresses big picture ecological questions like "Which habitats do sharks prefer?" and "Where do sharks migrate and for what purpose?"; • describes the astonishing diversity of sharks' adaptations to their environment; • discusses which shark conservation techniques do and don't work; and • comments on the use and misuse of science in the study of sharks. Enhanced by hundreds of original color photographs and beautifully detailed line drawings, *Shark Biology and Conservation* will appeal to anyone who is spellbound by this wondrous, ecologically important, and threatened group, including marine biologists, wildlife educators, students, and shark enthusiasts.

The Sharks of North American Waters CRC Press

The University of Florida has an ambitious goal: to harness the power of its faculty, staff, students, and alumni to solve some of society's most pressing problems and to become a resource for the state of Florida, the nation, and the world. In 1958, a panel funded by the Office of Naval Research initiated the formation of the International Shark Attack File, the first comprehensive documentation of shark attacks on a global and historical level. In 1988, the file was transferred to the Florida Museum of Natural History at the University of Florida. It is part of the Florida Program for Shark Research, directed by George H. Burgess, the planet's expert on shark attacks, and staffed by a world-renowned team of research scientists and educators. Travel the globe with Burgess, the Sherlock Holmes of shark attacks, as he studies mauled remains and the scars of the lucky survivors. His most famous case took him to an idyllic Red Sea resort where panic had set in after five attacks occurred in a single week. The attacks were carried out by Oceanic White Tips and a Mako, deep-water species that had no business being so close to the beach. Following the clues--dive-boat operators feeding sharks by hand to entertain tourists, the disappearance of the yearly tuna catch, and the dead sheep New Zealand cargo companies had been tossing overboard--Burgess solves the mystery of the shark attacks for Egyptian tourism officials and offers a list of best

practices. But not all cases end with an easy prescription. In St. Petersburg Beach, Florida, he visits a recent shark-attack victim, bitten just off her dock on Boca Ciega Bay. While the victim would prefer to forget the fateful day the sharp-toothed jaws of the Bull Shark latched onto her leg just below the knee, Burgess gently coaxes the story from her. It will go in the file, to educate other shark researchers and educators and help us better understand the world's most feared predator. The stories chronicled in *Gatorbytes* span all colleges and units across the UF campus. They detail the far reaching impact of UF's research, technologies, and innovations--and the UF faculty members dedicated to them. *Gatorbytes* describe how UF is continuing to build on its strengths and extend the reach of its efforts so that it can help even more people in even more places.

Reef Sharks and Rays of the World University Press of Florida
A richly illustrated and comprehensive introduction to the world's sharks. Sharks are the top predators in many marine ecosystems. But tales of the killer instincts and fearsomely sharp senses of these hunters can obscure their full life histories. In fact, sharks are characterful, exhibit surprisingly complex behaviors, and lead secretive lives full of interest in every type of marine habitat. *The Lives of Sharks* is a fascinating and beautifully illustrated guide to these iconic marine creatures from two world-renowned experts. This book explores shark physiology, anatomy, behavior, ecology, and evolution, as well as conservation and the impact of human activity on shark populations. With stunning photographs and illustrations, as well as profiles of selected species, this is a comprehensive, authoritative, and inviting introduction to global shark life today.

For many years, brief encounters between sharks and humans could leave the latter with a vivid memory of the much-maligned fish but no convenient means of identifying it more specifically. With the publication of *The Sharks of North American Waters* in 1983, everyone from the experienced ichthyologist to the weekend angler had access to concise descriptions and accurate,

detailed drawings in this handy field guide to more than one hundred species. All species that have been reported within five hundred nautical miles of U.S. and Canadian shores (plus a few deep-water species from adjacent areas) are illustrated, with summaries of diagnostic characteristics, similar species, geographic range, biology, reproduction, utility, and fishing methods. An illustrated key to the families of sharks, family descriptions, and species characteristics makes field identification simple. Also included is a general account of the evolution of sharks, their anatomy, reproduction, and distribution.
