Culturally powerful

ideas of normalcy and
deviation, individual
responsibility, and
what is medically
feasible shape the
ways in which we live
with illness and
disability. The essays

in this volume show how illness narratives expressed in a variety of forms—biographical essays, fictional texts, cartoons, graphic novels, and comics—reflect on and grapple with the fact that these human experiences are socially embedded and culturally shaped. Works of fiction addressing the impact of an illness or disability; autobiographies and memoirs exploring an experience of medical treatment; and comics that portray illness or disability from the perspective of patient, family member, or caregiver: all of these narratives forge a specific aesthetic in order to communicate their understanding of the human condition. This collection

demonstrates what can emerge when scholars and artists interested in fiction, life-writing, and comics collaborate to explore how various media portray illness, medical treatment, and disability. Rather than stopping at the limits of genre or medium, the essays talk across fields, exploring together how works in these different forms craft narratives and aesthetics to negotiate contention and build community around those experiences and to discover how the knowledge and experiences of illness and disability circulate within the realms of medicine, art, the personal, and the cultural. Ultimately, they demonstrate a common purpose: to examine the ways comics and literary

texts build an audience and galvanize not just empathy but also action. In addition to the editors, the contributors to this volume include Einat Avrahami, Maureen Burdock, Elizabeth J. Donaldson, Ariela Freedman, Rieke Jordan, stef lenk, Leah Misemer, Tahneer Oksman, Nina Schmidt, and Helen Spandler. Chapter 7, "Crafting Psychiatric Contention Through Single-Panel Cartoons," by Helen Spandler, is available as Open Access courtesy of a grant from the Wellcome Trust. A link to the OA version of this chapter is forthcoming.

In its landmark report,

Health Literacy: A Prescription to End Confusion, the Institute of Medicine noted that there are 90 million adults in the United States with limited health literacy who cannot fully benefit from what the health and health care systems have to offer. Since the release of that report, health literacy has become a vibrant research field that has developed and disseminated a wide range of tools and practices that have helped organizations, ranging in size from large health care systems to individual health care providers and pharmacists, to engage in health literate discussions with and provide health literate materials for patients and family members.

Improving the health literacy of organizations can be an important component of addressing the social determinants of health and achieving the triple aim of improving the patient experience, improving the health of populations, and reducing the cost of care. However, the focus on organizations does not address the larger issue of how to improve health literacy across the U.S. population. To get a better understanding of the state of community-based health literacy interventions, the Roundtable on Health Literacy hosted a workshop on July 19, 2017 on community-based health literacy interventions. It featured examples of

community-based health literacy programs, discussions on how to evaluate such programs, and the actions the field can take to embrace this larger view of health literacy. This publication summarizes the presentations and discussions from the workshop.

"Joyful and funny . . . Park uses science, compassion, humor, diverse stories and examples of her own shame-free living to take the stigma out of these infections."

—The New York Times
With curiosity and wit, *Strange Bedfellows* rips back the bedsheets to expose what really happens when STDs enter the sack. Sexually transmitted diseases have been hidden players in our lives for the whole of human history, with roles in everything from World War II to the growth of the Internet to *The Bachelor*. But despite their prominence, STDs have been shrouded in mystery and taboo for centuries, which begs the question: why do we know so little about them? Enter Ina Park,

MD, who has been pushing boundaries to empower and inform others about sexual health for decades. With *Strange Bedfellows*, she ventures far beyond the bedroom to examine the hidden role and influence of these widely misunderstood infections and share their untold stories. Covering everything from AIDS to Zika, Park explores STDs on the cellular, individual, and population-level. She blends science and storytelling with historical tales, real life sexual escapades, and interviews with leading scientists—weaving in a healthy dose of hilarity along the way. The truth is, most of us are sexually active, yet we're often unaware of the universe of

microscopic bedfellows inside our pants. Park aims to change this by bringing knowledge to the masses in an accessible, no-nonsense, humorous way—helping readers understand the broad impact STDs have on our lives, while at the same time erasing the unfair stigmas attached to them. A departure from the cone of awkward silence and shame that so often surrounds sexual health, *Strange Bedfellows* is the straight-shooting book about the consequences of sex that all curious readers have been looking for. Communities in Action Jaypee Brothers,Medical Publishers Pvt. Limited
In the United States, some populations suffer from far greater disparities in health than others. Those

disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these

factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome. *GHAH ESSENTIAL PEDIATRICS, 9E* U of Minnesota Press
In cities around the world, planning and

health experts are beginning to understand the role of social and environmental conditions that lead to trauma. By respecting the lived experience of those who were most impacted by harms, some cities have developed innovative solutions for urban trauma. In *Cities for Life*, public health expert Jason Corburn shares lessons from three of these cities: Richmond, California; Medellín, Colombia; and Nairobi, Kenya. Corburn draws from his work with citizens, activists, and decision-makers in these cities over a ten-year period, as individuals and communities worked to heal from trauma-- including from gun violence, housing and food insecurity,

poverty, and other harms. *Cities for Life* is about a new way forward with urban communities that rebuilds our social institutions, practices, and policies to be more focused on healing and health.

Something Happened in Our Park National Academies Press Documentary filmmaker Ray Wheeler is down on his luck. Embroiled in a lawsuit, he is reeling from the consequences of a near-fatal shooting on his last film, and has just lost his teaching gig. Broke and beleaguered, he can't afford to be particular about his next project. So when a former student invites him to film the comeback of Lena Wells, an iconic rock-and-roll singer who hit it big in the seventies, more than two decades earlier, he reluctantly agrees—even though he doesn't like her music. When Ray arrives at Lena's hometown of Medicine Park, Oklahoma, a defunct resort

community, he is determined to approach his topic with the professional detachment that has guided his career. His work ethic is modeled on the prime directive of Star Trek: never interfere with an alien civilization. But with only five days left before Lena's comeback concert, Ray quickly runs afoul of his subject, who places him on a one-week probation. The terms: impress her or else. It doesn't take long before Ray violates his own ethical standards. Drawn romantically toward Lena, he also fails to prevent himself from interfering with the lives of the people closest to her, including her only son, Gram, whose paternity is a mystery even to himself; her daughter-

in-law, Jettie; and the enigmatic guitar player Cyril Dodge. When disaster strikes Ray's set again, this time in Medicine Park, he must face truths he has avoided for too long—about love, relationships, and responsibility. An ode to both southwestern Oklahoma and rock music, *Live from Medicine Park* is a bittersweet reflection on the search for identity and purpose amid tragedy. As the novel reaches its climax, Ray sets out on one last adventure to set things right. Redemption may be possible—but only on its own terms.
