Advanced electrical technology, by h. cotton Nabu Press

Written in lucid prose, this text provides students of electrical engineering and practicing electrical design engineers with the properties of electrical steels. Beckley (Cardiff U., UK, consultant to Cogent Power), who has published extensively on the subject, defines the principles behind the actions of electrical steels, their properties, and the history of their development. He then describes manufacturing methods, range of materials, coatings, insulation, effects of punching and core building, high-frequency applications, and testing, among other topics. (See: 'Reason and Authority' & 'Dr. Bates Lecture' in Better Eyesight Magazine; November, 1919, April, 1923.) Dr. Bates then opened his own office, a Clinic New York City. He treated thousands of people by natural methods.
