SALAZAR SONNY

Casablanca John Wiley & Sons

"Labeled as greedy and self-interested, capitalists have often suffered in historians' eyes. This book looks at merchants, entrepreneurs, and other individuals from around 1500 to 1800 - with some attention to their medieval roots - and asks how they actually saw themselves. Coming from deeply religious cultures, how did they relate their worldly activities to their beliefs and values? Did they see a conflict, as Weber might have imagined, or did they live at relative ease with the tensions between obedience to faith and the necessities of competition and striving? Drawing on personal letters and diaries, as well as handbooks, portraiture, and other pieces of material culture in general, the contributors to this volume each help to reconstruct an understanding of the people who put in place what became the dominant economic system in the Western world."--BOOK JACKET.

Calvin Amberley Publishing Limited

This volume in the highly respected Cambridge History of Science series is devoted to the history of science, medicine and mathematics of the Old World in antiquity. Organized by topic and culture, its essays by distinguished scholars offer the most comprehensive and up-to-date history of ancient science currently available. Together, they reveal the diversity of goals, contexts, and accomplishments in the study of nature in Mesopotamia, Egypt, Greece, Rome, China, and India. Intended to provide a balanced and inclusive treatment of the ancient world, contributors consider scientific, medical and mathematical learning in the cultures associated with the ancient world.

The Senses in Early Modern England, 1558-1660 BRILL

2017 marked the 250-year anniversary of the expulsion of the Jesuits from Spanish territories. The Jesuits made major contributions to the cultural and intellectual life of Latin America. When they were expelled in 1767 the Jesuits were administering over 250,000 Indians in over 200 missions. The Jesuits pioneered interest in indigenous languages and cultures, compiling dictionaries and writing some of the earliest ethnographies of the region. They also explored the region's natural history and made significant contributions to the development of science and medicine. On their estates and in the missions they introduced new plants, livestock, and agricultural techniques, such as irrigation. In addition, they left a lasting legacy on the region's architecture, art, and music. The volume demonstrates the diversity of Jesuit contributions to Latin American culture. Published works often focus on one theme or region that is approached from a particular disciplinary perspective. This volume is therefore unusual in considering not only the range of Jesuit activities but also the diversity of perspectives from which they may be approached. It includes papers from scholars of history, linguistics, religion, art, architecture, cartography, music, medicine and science.

Studies in the History and Method of Science Simon and Schuster

Chromatic Cinema Color permeates film and its history, but study of its contribution to film has so far been fragmentary. *Chromatic Cinema* provides the first wide-ranging historical overview of screen color, exploring the changing uses and meanings of color in moving images, from hand painting in early skirt dance films to current trends in digital color manipulation. In this richly illustrated study, Richard Misek offers both a history and a theory of screen color. He argues that cinematic color emerged from, defined itself in response to, and has evolved in symbiosis with black and white. Exploring the technological, cultural, economic, and artistic factors that have defined this evolving symbiosis, Misek provides an in-depth yet accessible account of color's spread through, and ultimate effacement of, black-and-white cinema.

A Review of the Scarce and Threatened Coleoptera of Great Britain U of Minnesota Press

This book makes Moore's wisdom available to students in a lively, richly illustrated account of the history and workings of life. Employing rhetoric strategies including case histories, hypotheses and

deductions, and chronological narrative, it provides both a cultural history of biology and an introduction to the procedures and values of science.

Knowledge and Colonialism Flame Tree Illustrated

A broken piano, a dilapidated staircase, a chair half standing on two bent legs surrounded by layers of history peeling from the wallpaper of an abandoned house. The chilling air of an abandoned church, or a desolated factory, with the faint signs of the human sounds now trapped in the detritus of lost interiors. In Michigan, in Italy, in Russia, Japan, in China, the lost dreams of a teeming human horde are captured in this evocative exploration of abandoned buildings, the achievements of humankind struck down by calamity or neglect, then over-run by the ancient forces of time and nature, as the planet earth moves slowly to regain its supremacy against the noisy, mechanical clatter of the human species. The incredible new book explores the half-life of abandoned buildings and the sad beauty of desolation.

Borderland Jaguars Viking Adult

Casablanca is a city of international renown, not least because of its urban structures and features.

Celebrated by colonial writers, filmed by Hollywood, magnet for Europeans and Moroccans, Casablanca is above all an exceptional collection of urban spaces, houses, and gardens. While it is true that Casablanca developed as a port city well before the introduction of the French in 1907, it unquestionably ranks among the most significant urban creations of the twentieth century, attracting remarkable teams of architects and planners. Their commissions came from clients who were interested in innovation and modernization, thereby fostering the emergence of Casablanca as a laboratory for legislative, technological, and visual experimentation. Having studied the city for ten years, Jean-Louis Cohen and Monique Eleb trace, from the late nineteenth century to the early 1960s, the rebirth of a once-forgotten port and its metamorphosis into a teeming metropolis that is an amalgam of Mediterranean culture from Tunisia, Algeria, Spain, and Italy. The extensive presentation of the significant buildings of this hybrid city -- where, alongside the French, Muslim and Jewish Moroccan patrons commissioned provocative buildings -- is drawn from French and Moroccan archives, including hundreds of previously unpublished photographs. Cohen and Eleb focus as much on Casablanca's diverse social fabric as its urban spaces, chronicling the clients, inhabitants, and inventive architects who comprise the human component of an essential yet overlooked episode of modernism.

The Legacy of Islam Baker Academic

This Action Plan provides an overview of the state of knowledge about all species of lagomorphs, provides a contemporary framework about their importance to humans and the world's ecosystems, reviews their status on a worldwide scale, and makes recommendations for conservation action to prevent the extinction of any lagomorph species and to allow their populations to recover to safe and production levels.

Palaeolimnological Proxies as Tools of Environmental Reconstruction in Fresh Water Springer Science & Business Media

'Abandoned Places II' is the successor of 'Abandoned Places'; a unique photography project.

The Cultural Worlds of the Jesuits in Colonial Latin America BRILL

The final book of the Bible, Revelation prophesies the ultimate judgement of mankind in a series of allegorical visions, grisly images and numerological predictions. According to these, empires will fall, the "Beast" will be destroyed and Christ will rule a new Jerusalem. With an introduction by Will Self.

Pharmacographia Alpha Edition

Anthropomorphism closely relates to early modern notions of analogy and microcosm. Exploring the tension inherent in such notions, the essays in this volume address the contradictions and tensions, between magical and rational, speculative and practical thought, that anthropomorphism entails.

Revelation Lannoo Publishers (Acc)

This study is concerned with the topographical layout of Bernard of Clairvaux's "Parables." It examines his treatment of such locations as Paradise, Egypt, and the bridegroom's chamber, and his reformulation of central monastic issues as navigations within spiritual landscapes.

The Oxford Companion to Classical Literature Franklin Classics Trade Press

Stratigraphy, a branch of geology, is the science of describing the vertical and lateral relationships of different rock formations formed through time to understand the earth history. These relationships may be based on lithologic properties (named lithostratigraphy), fossil content (labeled biostratigraphy), magnetic properties (called magnetostratigraphy), chemical features (named chemostratigraphy), reflection seismology (named seismic stratigraphy), age relations (called chronostratigraphy). Also, it refers to archaeological deposits called archaeological stratigraphy. Stratigraphy is built on the concept "the present is the key to the past" which was first outlined by James Hutton in the late 1700s and developed by Charles Lyell in the early 1800s. This book focuses particularly on application of geophysical methods in stratigraphic investigations and stratigraphic analysis of layered basin deposits from different geologic settings and present continental areas extending from Mexico region (north America) through Alpine belt including Italy, Greece, Iraq to Russia (northern Asia).

Picturing Palgrave MacMillan

More than 200 haunting photographs capture the very heart and soul of jazz music.

ABANDONED PLANET Institute of Latin American Studies

Huffington Post called him "a master of the abandoned"—and for good reason. The "activist" known only as Seph Lawless has spent the last ten years photo-documenting the America that was left behind in the throes of economic instability and overall decline—decrepit shopping malls, houses, factories, even amusement parks. Through nearly two hundred gorgeous and elegiac photographs, *Abandoned* details Lawless's journey into what was once the very heart of American entertainment: the amusement park. Lawless visits deserted parks across the country, capturing in stark detail their dilapidated state, natural overgrowth, and obvious duality of sad and playful symbolism. Previously self-published as *Bizarro*, this updated edition of Lawless's photographic tribute to decaying American amusement parks contains new content and a new foreword. For the first time, the famed photojournalist Seph Lawless makes his moving work available in a stunning trade edition.

Critique of Cynical Reason Cambridge University Press

"Featuring more than 100 locations, from ghost towns to amusement parks, roads to railways, hotels to hospitals. From war to chemical disasters, from grand follies to changing fashions, the story

behind each striking image is explained."--Page [4] of cover.

Science as a Way of Knowing IUCN

A haunting collection of images from photographer Simon Sugden revealing the beauty in decaying buildings around Britain.

The Eye of Jazz BoD - Books on Demand

This publication comprises the proceedings of the first International Conference devoted to the structural roots of trees and woody plants. 'The Supporting Roots - Structure and Function,' 20-24 July 1998, Bordeaux, France. The meeting was held under the auspices of IUFRO WPS 2. 01. 13 'Root Physiology and Symbiosis,' and its aim was to bring together scientific researchers, foresters and arboriculturalists, to discuss current problems in structural root research and disseminate knowledge to an audience from a wide disciplinary background. For the first time in an international conference, emphasis was placed on presenting recent research in the field of tree anchorage mechanics and root biomechanics. The way in which tree stability can be affected by root system symmetry and architecture was addressed, as well as how movement during wind sway can influence the development and shape of woody roots. The role of different nursery and planting techniques was discussed, in relation to effects on root system form and development. Root response to different environmental stresses, including water, temperature, nutrient and mechanical stress was addressed in detail. The structure and function of woody roots was also considered at different levels, from coarse to fine roots, with several papers discussing the interaction between roots and the rhizosphere. One of the conference highlights was the presentation of new methods in root research, by a series of workshops held at LRBB-INRA, Pierroton, on the northern border of the Gascony forest.

Wildlife Comeback in Europe Springer Science & Business Media

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format as the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

Paleontological Collections of Germany, Austria and Switzerland Canongate Books

Knowledge and Colonialism examines writings and drawings of eighteenth-century scientific travellers in South Africa against the background of administrative and commercial discourses. It is argued that these travellers benefited more from their relationship with the colonial order than the other way around
