Studying narratives is an ideal method to gain a good understanding of how various aspects of human information are organized and integrated. The concept and methods of a narrative, which have been explored in narratology and literary theories, are likely to be connected with contemporary information studies in the

future, including those in computational fields such as AI, and in cognitive science. This will result in the emergence of a significant conceptual and methodological foundation for various technologies of novel contents, media, human interface, etc. *Post-Narratology Through Computational and Cognitive Approaches* explores the new possibilities and directions of narrative-related technologies and theories and their implications on the innovative design, development, and creation of future media and contents (such as automatic narrative

or story generation systems) through interdisciplinary approaches to narratology that are dependent on computational and cognitive studies. While highlighting topics including artificial intelligence, narrative analysis, and rhetoric generation, this book is ideally designed for designers, creators, developers, researchers, and advanced-level students.

Narrative generation can be applied to systematic frameworks that cover theoretical and philosophical thoughts of narratives and narrative generation, analytical research of related narrative genres and narrative works, and narrative works writing and creation using narrative generation systems. The design and development of narrative generation systems refers to the themes regarding narrative work creation as arts and literature through narrative generation systems beyond narrative generation systems as a technology. Internal and External Narrative Generation Based on Post-Narratology: Emerging Research and Opportunities is an essential scholarly publication that explores the creation of

narrative systems using practical frameworks and advanced narrative analysis. Highlighting a range of topics such as marketing, synthetic narrative, and application systems, this book is ideal for academicians, information technology professionals, designers, developers, researchers, and students.

**Ranma 1/2 (2-in-1 Edition), Vol. 1** VIZ Media LLC

A fascinating period in Japanese History explored by a master of manga Showa 1926-1939: A History of Japan is the first volume of Shigeru Mizuki's meticulously researched historical portrait of twentieth century Japan. This volume deals with the period leading up to World War II, a time of high unemployment and other

economic hardships caused by the Great Depression. Mizuki's photo-realist style effortlessly brings to life Japan of the 1920s and 1930s, depicting bustling city streets and abandoned graveyards with equal ease. When the Showa Era began, Mizuki himself was just a few years old, so his earliest memories coincide with the earliest events of the Era. With his trusty narrator Rat Man, Mizuki brings history into the realm of the personal, making it palatable, and indeed compelling, for young audiences as well as more mature readers. As he describes the militarization that leads up to World War II, Mizuki's stance toward war is thoughtful and often downright critical – his portrayal of the Nanjing Massacre clearly paints the incident (a disputed topic within Japan) as an atrocity. Mizuki's Showa 1926-1939 is a beautifully told history that tracks how technological developments and the

country's shifting economic stability had a role in shaping Japan's foreign policy in the early twentieth century. Translated from the Japanese by Zack Davisson.
