RODGERS BRADFORD

The New Pediatrics McGraw-Hill Education / Medical

One learns medicine, including pediatrics, by first learning a set of rules and then spending the rest of his/her productive career discovering exceptions to those rules. This book is intended to serve as a study guide for organizing the acquisition of an initial foundation of information about pediatric topics. Without an initial set of rules all new information is simply another new rule, and not an interpretive frame of reference for the deeper level of understanding that occurs with recognition that one is dealing with a change in his previously held belief. As such, I have attempted to include what I think most would agree are commonly held operational "facts" of pediatrics, and have not tried to justify or substantiate the facts with references or lengthy background information as to why these facts are currently thought to be true. My primary intent in writing this book is to provide an adequate core of pediatric information to enable one to pass the pediatric portion of the national boards. I hope it will also provide a foundation for those who wish to spend more time discovering why children are different. If this study guide fulfills whichever of these needs is yours, it will have been successful. A. Eugene Osburn Acknowledgments I am grateful for the help and support provided by the secretaries, Phyllis Bullock, Jeannie Brown, Debby Williams, Tiffany Schoonover, and Christy Anthony in preparation of this manuscript.

Baby Doctor Springer Science & Business Media

"A groundbreaking medical memoir by one of our nation's leading pediatric surgeons - the visionary head of Children's National - for fans of Jerome Groopman and Atul Gawande. Anyone who has seen a child recover from a deep wound or a broken bone knows that kids are made to heal. Their bodies are more resilient, more adaptive, and far more able to withstand acute stress than adults. And yet children are often treated as an afterthought by the medical establishment and shunted off to doctors who specialize in treating adults. Will an anesthesiologist accustomed to treating older patients know how best to handle a toddler going under for the first time? If your soccer-playing daughter suffers a concussion, should you take her to the nearest ER--or drive further to seek out doctors who specialize in treating kids? In this deeply inspiring memoir Dr. Kurt Newman draws from his long experience as a pediatric surgeon working at one of our nation's top children's hospitals to make the case that children are more than miniature adults. Through the story of his own career and deeply moving accounts of the brave kids he has treated over the years (and their equally brave and determined parents) he reveals the revolution that is taking place in pediatric medicine"--

This is the 20th Annual volume of the noted international series, Recent Advances in Pediatrics. The series has the distinction of uninterrupted appearance ever since 1990-91 when it was launched. To date, over and above the 20 Annual volumes, the series has to its credit 21 special volumes on various subspecialties in pediatrics. The present volume aims at covering the currently outstanding hot topics in pediatrics of special relevance to resource-limited countries. The approach is multidisciplinary with an eye on future. The 33 peer-reviewed, evidence-based and state-of-the-art chapters contributed by as many as 46 experts drawn from India and other countries provide depth and breadth of the expanding knowledge in the field of contemporary pediatrics. Also incorporated along with the recent and current advances is the time-honored art of pediatric practice as and when applicable. The treatise presents threadbare discussions on a plethora of hot topics ranging from nanomedicine, community care of the newborn, respiratory distress syndrome and neonatal

cholestasis, through non-Hodkin lymphoma, and febrile and transient neutropenia, to pediatric emergencies and blood component therapy. Overviews on two offbeat topics, “Epigenetics” and “Translational Medicine and Research” provide a refreshing flavor of the advances that are set to make strides in the near future. Each and every chapter is remarkable by its excellence, providing a stimulating and, not infrequently, even provocative, mature and informal update. Today, such an approach is considered the backbone for information, motivation of discussion, interaction, research and innovation.

Advances in Pediatrics, E-Book 2023 Jaypee Brothers, Medical Publishers Pvt. Limited

For the first time, Pediatric Clinics is devoting one issue to two clinically focused topics: Pediatric Palliative Care and Pediatric Hospital Medicine. Dr. Ottolini has organized her section to focus on a variety of issues of relevant to all pediatricians, but which pose special challenge to the Pediatric Hospitalists. As pediatric care has advanced, children who would not have survived infancy are growing into young adults with complex chronic diseases and dependence upon technology. They frequently require hospitalization to address exacerbation of underlying disease processes and procedures to improve their quality of life. The articles are devoted to patient care challenges of troubleshooting malfunctioning technology, co-managing medically complex patients pre and post-op with surgical colleagues, and the Hospitalist's evolving role in performing procedures and sedation in this population of vulnerable patients. Also discussed rare strategies to maximize communication with parents, patients and primary care providers during hospitalization, especially for medically complex patients. Dr. Ullrich and Dr. Wolfe Pediatric have worked to bring relevant articles on palliative care to the pediatrician. While life-threatening conditions in childhood are rare, children with LTC account for a high proportion of pediatric hospital care, and about one half of such children die in the inpatient setting. The number of hospital-based pediatric palliative care programs has increased dramatically over the past decade to meet the palliative care needs of hospitalized children including symptom management, facilitation of communication, decision-making and advance care planning support, and coordination of care. Given these considerations, it is evident that the topics of pediatric palliative care and hospital medicine are fitting counterparts for this comprehensive issue.

The Philadelphia Guide: Inpatient Pediatrics, 2nd Edition World Scientific

This book tells true and poignant stories from both sides of the physician-patient/parent relationship and provides a unique glimpse into how parents and physicians think, feel, and interact. The stories are grouped under four sections: Hope, Compassion, Communication, and Trust. Each section includes stories contributed by parents from all across the United States and by pediatricians practicing at many of the best children's hospitals throughout the country. The parents tell of interactions with physicians that had a significant impact on them and their child and offer context and insight that promote empathy and reflection. The physicians tell of interactions with patients and families that served as learning moments in their career and promote the humanization of medicine and show there is more to a physician beyond their scientific knowledge and white coat. The stories are edited by Barry P. Markovitz - a pediatrician specializing in critical care medicine who has been in practice for more than 20 years and by Ann F. Schrooten - the parent of a child born with a chronic complex condition who has more than 15 years of experience interacting with pediatric subspecialists and other healthcare professionals who cared for her son. The editors have written commentaries to the stories to provide an independent perspective on the events and messages conveyed and to encourage reflection, inquiry, and discussion. In addition to being a valuable resource for pediatricians, pediatric subspecialists, nurses and other healthcare professionals, the book will also appeal to families of children living with complex medical conditions because it shares physician encounters and behaviors many have experienced in the care of their own children. By giving a voice to both parents and physicians, the goal is to create a bridge to better understanding that can improve communication, minimize conflicts, and foster trust and compassion among physicians, patients, and families.
