PHTLS: Soporte Vital de Trauma Prehospitalario, octava edición, es el siguiente paso en la evolución del principal programa educativo de Trauma Prehospitalario. Durante tres décadas, el PHTLS ha mejorado la calidad del cuidado del paciente traumatizado y ha salvado vidas. La octava edición del PHTLS continúa con la misión de promover la excelencia en el manejo del paciente traumatizado en todos los proveedores involucrados en el cuidado prehospitalario por medio de una educación global. Este programa legendario fue desarrollado a principios de la década de los ochenta del siglo pasado por la Asociación Nacional de Técnicos en Urgencias Médicas (Association of Emergency Medical Technicians, NAEMT), con la cooperación del Comité para el Trauma del Colegio Americano de Cirujanos (American College of Surgeons Committee on Trauma, ACS-COT). El contenido médico se revisa y actualiza de manera continua para que refleje lo último y lo más actualizado del conocimiento y la práctica. El PHTLS promueve el pensamiento crítico como la base para proporcionar un cuidado de calidad. Se fundamenta en la creencia de que los practicantes de los

servicios médicos de urgencia toman las mejores decisiones en beneficio de sus pacientes cuando se les da una buena base de conocimiento y principios clave. La octava edición de PHTLS presenta un nuevo capítulo, Fisiología de la vida y la muerte, que crea un entendimiento sólido de la fisiología de la vida y de la fisiopatología que puede llevar a la muerte. Ese entendimiento es esencial para el proveedor del cuidado prehospitalario para que pueda tratar las anomalías rápidamente, en caso de encontrarlas en el paciente traumatizado. Public reading programs are flourishing in many Latin American cities in the new millennium. They defy the conception of reading as solitary and private by literally taking literature to the streets to create new communities of readers. From institutional and official to informal and spontaneous, the reading programs all use public space, distribute creative writing to a mass public, foster collective rather than individual reading, and provide access to literature in unconventional arenas. The first international study of contemporary print culture in the Americas, *Public Pages* reveals how recent cultural policy and collective literary reading intervene in public space to promote social integration in cities in Colombia, Argentina, Brazil, Mexico, and Chile. Marcy Schwartz looks at broad institutional programs such as UNESCO World Book Capital campaigns and the distribution of free books on public transportation, as well as local initiatives that produce handmade books out of recycled materials (known as cartoneras) and display banned books at former military detention centers. She maps the connection between literary reading and the development of cultural citizenship in Latin America, with municipalities, cultural centers, and groups of ordinary citizens harnessing reading as an activity both social and literary. Along with other strategies for reclaiming democracy after decades of authoritarian regimes and political violence, as well as responding to neoliberal economic policies, these acts of reading collectively in public settings invite civic participation and affirm local belonging.

Recent advances in early detection and cancer therapeutics have revolutionized the field of oncology. Cancer is no longer a death sentence. It is a disease that can be cured or, in many instances, converted into a chronic condition. The end result is a new cohort of patients with sufficient survival to develop cardiovascular complications from their cancer treatment. These cardiovascular complications are of paramount importance, as they represent the number one cause of death for the cancer survivor. The ultimate goal is the selection of the oncologic regimen that would achieve the highest possible rate of cure or remission, with the lowest possible rate of treatment withdrawals and cardiovascular side effects. This important book brings us closer to this goal. *Cardio-Oncology* includes a theory book and a case study book. The clinical cases atlas is intended as a starting point to organize multidisciplinary care of cancer patients. By means of 20 clinical cases, practical information about diagnosis, management and prevention of cancer therapeutic-related cardiac diseases are discussed, with the goal of minimizing cancer treatment interruptions and to ensure long-term event-free cardiovascular survival. Also included is the application Augmented Reality, which allows users to scan and watch videos accessed from the book on an electronic device (phone or tablet). Download the application on to an Android or Apple device and the reader will have full access to the videos featured as pictures inside each book. [Subject: Cardio-oncology, Oncology, Medicine]

Cicero (Marcus Tullius, 106-43 BCE), Roman lawyer, orator, politician and philosopher, of whom we know more than of any other Roman, lived through the stirring era which saw the rise, dictatorship, and death of Julius Caesar in a tottering republic. In his political speeches especially and in his correspondence we see the excitement, tension and intrigue of politics and the part he played in the turmoil of the time. Of about 106 speeches, delivered before the Roman people or the Senate if they were political, before jurors if judicial, 58 survive (a few of them incompletely). In the fourteenth century Petrarch and other Italian humanists discovered manuscripts containing more than 900 letters of which more than 800 were written by Cicero and nearly 100 by others to him. These afford a revelation of the man all the more striking because most were not written for publication. Six rhetorical works survive and another in fragments. Philosophical works include seven extant major compositions and a number of others; and some lost. There is also poetry, some original, some as translations from the Greek. The Loeb Classical Library edition of Cicero is in twenty-nine volumes.

The People's Covenant and God's Hammer have raged a Cold War that has lasted for over twenty years. A war without armies, where battles are fought in the dark and information is the most dangerous weapon. In this world —which sometimes seems the Middle Ages, sometimes the Renaissance and sometimes the Nineteenth Century— lives Yáxtor Brandan, empirical adept at the service of the Queen of Alboné. A relentless, amoral and unscrupulous character, Yáxtor fights to recover his own past as he tries to prevent a new player in the espionage game to end the world, as he knows it. A fascinating fast-moving and complex plot, full of tension and surprises and excellently paced; a main character for whom it should be impossible to feel the slightest sympathy, and yet somehow we do, even as his cruelty disturbs us more and more -an extremely difficult feat to pull off so successfully; powerful secondary actors, who either leave you with a sense of uneasiness with regard to their motivations and loyalties, or make you want to shout out -as people did in the early days of cinema- "Look out, don't trust him!"; and a pervading atmosphere of tragedy, especially in a final unexpected and shocking, yet on reflection almost inevitable, scene. In short, a totally addictive and highly original novel set in a world that is at once both strangely familiar and disturbingly alien. —Steve Redwood, author of *Fisher of Devils*.
