All of us involved in science education

understand the importance of scientific

literacy. How do we get the attention of a

nonscientist? And if we can get it, how do

we keep it - not only for the duration of the

course or the chapter in a textbook but

beyond? How do we convey in our courses

and our textbooks not just what we know

but also how science is done? These are

the challenges we hope to address with

our new series of textbooks specifically for

the nonscientist. With this series, W. H.

Freeman and Scientific American join

forces not just to engage nonscientists but

to equip them critical life tools.
