Ancient Greece and Rome BRILL

The methodology of New Testament textual criticism, the critical evaluation of readings, and the history and texts of early Christianity is the focus of the influential work of J. K. Elliott. *Readings in Early Christianity: Texts and Traditions* offers eighteen essays on these topics in his honour.

Explores four key questions around Roman funerary customs that change our view of the society and its values.

The author of *Luke-Acts* constructs a

portrait of the Roman military that relies on a variety of literary stereotypes, anticipating that his authorial audience, familiar with the stereotypes, will bring their experience to bear in the process of more fully characterizing the soldiers. Expecting their antipathy, Luke upsets his authorial audience's expectations. Laurie Brink demonstrates that the soldiers, in fact, do not wholly live up to their bad reputations. Engaging, contradicting and transcending the literary stereotypes, Luke creates a progressive portrait of the Roman soldier that demonstrates the attitudes and actions of a good disciple, and that serves as a

critique of the authorial audience's original response.

 Competition is everywhere in antiquity. It took many forms: the upper class competed with their peers and with historical and mythological predecessors; artists of all kinds emulated generic models and past masterpieces; philosophers and their schools vied with one another to give the best interpretation of the world; architects and doctors tried to outdo their fellow craftsmen. Discord and conflict resulted, but so did innovation, social cohesion, and political stability. In Hesiod's view Eris was not one

entity but two, the one a "grievous goddess," the other an "aid to men." Eris vs.

Aemulatio examines the functioning and effect of competition in ancient society, in both its productive and destructive aspects.

The Encyclopedia of Ancient Natural Scientists is the first comprehensive English language work to provide a survey of all ancient natural science, from its beginnings through the end of Late Antiquity. A team of over 100 of the world’s experts in the field have compiled this Encyclopedia, including entries which

are not mentioned in any other reference work – resulting in a unique and hugely ambitious resource which will prove indispensable for anyone seeking the details of the history of ancient science.

Additional features include a Glossary, Gazetteer, and Time-Line. The Glossary explains many Greek (or Latin) terms difficult to translate, whilst the Gazetteer describes the many locales from which scientists came. The Time-Line shows the rapid rise in the practice of science in the 5th century BCE and rapid decline after Hadrian, due to the centralization of Roman power, with consequent loss of a context within which science could flourish. *Jesus* Cambridge

Originally published in 1954, this book presents a detailed study regarding the early Christian theologian Origen, focusing mainly on his doctrine of tradition and its relationship with his interpretation of the Bible. The text was written by Richard Patrick Crosland Hanson (1916-88), a notable Anglican bishop, theologian and historian of antiquities. A bibliography is included and detailed notes are incorporated throughout. This book will be of value to anyone with an interest in theology, biblical

studies and the works of Origen.

The starting point for the book is the following anomaly: If Jesus lived as has been supposed at the beginning of the 1st century AD, the only NT documents written by a near contemporary, the Epistles of St Paul, make no mention of him as an historical figure, neither do they record any of his sayings, but rather they talk of him as a

vision or mystical experience of the risen Christ. Further, the same is true of the earliest Christian non-NT texts, such as the Epistles of St Clement, roughly contemporary with Paul. Furthermore, contemporary records of the region from non-Christian sources, such as those by the Jewish historian Josephus, fail to mention Jesus at all where we would expect them to; the mentions that there are have recently been shown to be later interpolations by medieval Christian apologists - the gospel accounts of Jesus and his milieu are inaccurate in all major respects e. g. the relative dates of Herod and Pilate, if contemporary Roman and Jewish historians, who had no theological axe to grind, are taken

as measure. By comparative textual studies, the author shows that the gospel accounts of Jesus' life and sayings were written approximately 100 years after Jesus is supposed to have lived, and so 100 years later than alleged contemporaries such as Paul, Clement, Josephus etc.

Integrated computational materials engineering (ICME) is an emerging discipline that can accelerate materials development and unify design and manufacturing.

Developing ICME is a grand challenge that could provide significant economic benefit. To help develop a strategy for development of this new technology area, DOE and DoD asked the NRC to explore its benefits and promises, including the benefits of a comprehensive

ICME capability; to establish a strategy for development and maintenance of an ICME infrastructure, and to make recommendations about how best to meet these opportunities. This book provides a vision for ICME, a review of case studies and lessons learned, an analysis of technological barriers, and an evaluation of ways to overcome cultural and organizational challenges to develop the discipline.
