*The Substance of Gothic* Univ of California Press  
 In the early 1970s, empowered by the civil rights and women's movements, a new group of women writers began speaking to the American public. Their topic, broadly defined, was the postmodern American West. By the mid-1980s, their combined works made for a bona fide literary groundswell in both critical and commercial terms. However, as Krista Comer notes, despite the attentions of publishers, the media, and millions of readers, literary scholars have rarely addressed this movement or its writers. Too many critics, Comer argues, still enamored of western images that are both masculine and antimodern, have been slow to reckon with the emergence of a new, far more "feminine," postmodern, multiracial, and urban west. Here, she calls for a redesign of the field of western cultural studies, one that engages issues of gender and race and is more self-conscious about space itself\_ especially that cherished symbol of

western "authenticity," open landscape. Surveying works by Joan Didion, Wanda Coleman, Maxine Hong Kingston, Leslie Marmon Silko, Barbara Kingsolver, Pam Houston, Louise Erdrich, Sandra Cisneros, and Mary Clearman Blew, Comer shows how these and other contemporary women writers have mapped new geographical imaginations upon the cultural and social spaces of today's American West.

This handbook addresses the delivery of high quality pediatric behavioral healthcare services that are multitiered, evidence-based, and integrated, involving interprofessional collaboration across child serving systems, such as pediatrician offices and schools. The book sets forth a contemporary, leading edge approach that reflects the relationship between biological and psychosocial development and the influence of multiple systems, including the family, community, school, and the healthcare system on child development and functioning. It assists child-focused providers in developing knowledge about the relationship between biological and psychosocial development and between pediatric physical health and behavioral health problems.

Chapters cover common chronic illnesses and behavioral conditions and include guidelines for screening, assessment, diagnosis, prevention, and coordinated intervention. Chapters also include representative case studies that help illustrate efficacious, effective service-delivery approaches. The handbook concludes with recommendations for future research and directions for integrated pediatric behavioral healthcare. Topics featured in the Handbook include: Behavioral health aspects of chronic physical health conditions, including asthma, diabetes, chronic pain, traumatic brain injury, and cancer. Physical health implications of behavioral health and educational problems, including ADHD, learning disabilities, substance abuse, and ASD. Coping with chronic illness and medical stress. Patient adherence to medical recommendations and treatments. School reintegration after illness. The Handbook of Pediatric Behavioral Healthcare is a must-have resource for researchers, professors, and graduate students as well as clinicians, therapists, and other practitioners in clinical child and school psychology, primary care medicine, social work, child and adolescent psychiatry, public health, health psychology, pediatric medicine, nursing, behavioral therapy, rehabilitation, and counseling.

**Index Medicus** Cambridge University Press

The only compact yet comprehensive survey of environmental and cultural forces that have shaped the visual character and geographical diversity of the settled American landscape. The book examines the large-scale historical influences that have molded the varied human adaptation of the continent's physical topography to its needs over more than 500 years. It presents a synoptic view of myriad historical processes working together or in conflict, and illustrates them through their survival in or disappearance from the everyday landscapes of today.

**Substance Misuse and Young People** John Wiley & Sons

A groundbreaking collection of contemporary essays from leading international scholars that provides a balanced and expert account of the resurgent debate about substance dualism and its physicalist alternatives. Substance dualism has for some time been dismissed as an archaic and defeated position in philosophy of mind, but in recent years, the topic has experienced a resurgence of scholarly interest and has been restored to contemporary prominence by a growing minority of philosophers prepared to interrogate the core principles upon which past objections and misunderstandings rest. As the first book of its kind to bring together a collection of contemporary writing from top proponents and critics in a pro-contra format, *The Blackwell Companion to Substance Dualism* captures this ongoing dialogue and sets the stage for rigorous and lively discourse around dualist and physicalist accounts of human persons in philosophy. Chapters explore emergent, Thomistic, Cartesian, and other forms of substance dualism—broadly conceived—in dialogue with leading varieties of physicalism, including animalism, non-reductive physicalism, and constitution theory. Loose, Menuge, and Moreland pair essays from dualist advocates with astute criticism from physicalist opponents and vice versa, highlighting points of contrast for readers in thematic sections while showcasing today's leading minds engaged in direct debate. Taken together, essays provide nuanced paths of introduction for students, and capture the imagination of professional philosophers looking to expand their understanding of the subject. Skillfully curated and in touch with contemporary science as well as analytic theology, *The Blackwell Companion to Substance Dualism* strikes a measured balanced between advocacy and criticism, and is a first-rate resource for researchers, scholars, and students of philosophy, theology, and neuroscience.

[Sub]stance gives voice to a new generation of young designers emerging from the University of Pennsylvania's famous landscape architecture program. The mission of [Sub]stance is to scope some of the fundamental issues impacting upon the global landscape of the 21st century. It is a platform for imaginative and critical discourse and design speculation about the potential role that landscape architecture can have in understanding and changing the world we have created for ourselves. In its broadest sense the question asked by [Sub]stance is 'How are designers (in particular landscape architects) engaging with issues of ecology, economy, society and aesthetics in relation to the landscape of the 21st century?' The University of Pennsylvania's department of Landscape Architecture has a rich tradition of innovation and leadership in landscape architecture and regional planning. [Sub]stance gives voice to a new generation of young designers. [Sub]stance is a platform for speculations, questions and provocations. Its mission is to become a respected source for inspiration in the field of landscape architecture and related disciplines and professions. In the inaugural issue we seek "Landscapes of Substance", areas that help us better understand a world that has by now been thoroughly reconstructed by human agency. Not necessarily limited to the physical landscape some of the arguments delve into the thought processes that designers have in understanding our world.

The Blackwell Companion to Substance Dualism Routledge

While knowledge on substance abuse and addictions is expanding rapidly, clinical practice still lags behind. This book brings together leading experts to describe what treatment and prevention would look like if it were based on the best science available. The volume incorporates developmental, neurobiological, genetic, behavioral, and social-environmental perspectives. Tightly edited chapters summarize current thinking on the nature and causes of alcohol and other drug problems; discuss what works at the individual, family, and societal levels; and offer robust principles for developing more effective treatments and services.

The Art of Painting and Drawing in Coloured Crayons; Being a Course of Instruction for the Execution of Portraiture and Landscape ... Fourth Edition University of Chicago Press

Getting Wrecked provides a rich ethnographic account of women battling addiction as they cycle through jail, prison, and community treatment programs in Massachusetts. As incarceration has become a predominant American social policy for managing the problem of drug use, including the opioid epidemic, this book examines how prisons and jails have attempted concurrent programs of punishment and treatment to deal with inmates struggling with a diagnosis of substance use disorder. An addiction physician and medical anthropologist, Kimberly Sue powerfully illustrates the impacts of incarceration on women's lives as they seek well-being and better health while confronting lives marked by structural violence, gender inequity, and ongoing trauma.

There is a clear and pressing need for health professionals, including social workers, to be trained in evidence-based practices (EBPs) in the area of substance use disorders (SUD). The Substance Abuse and Mental Health Services Administration (SAMHSA) and other national organizations and government agencies have all put out reports calling for this vital need, though there remains a significant shortage of properly trained clinicians. The aim of this book is to provide an integrated perspective on addiction treatment on the evidence-base of psychosocial and medication-assisted treatment for substance use disorder. The volume is unique in that it critically examines the evidence base of both psychosocial and pharmacological

treatment practices targeting a profession of social work audience. It is also one of few that (1) incorporates evidence both from the United States and internationally, and (2) presents a methodology that permits the authors to systematically review a large number of empirically based studies in an organized and easy-to-read manner. Additionally, the text incorporates a health disparities perspective and describes implementation barriers at the organizational, community, and policy levels. It can be used in policy, human behavior, and clinical practice both nationally and internationally.

*The Theory and Practice of Landscape Painting in Water-colours* McGraw Hill Professional

The Mental Health-Substance Use series provides clear guidance for professionals on this complex and increasingly recognised field. It concentrates on the concerns, dilemmas and concepts that impact on the life and well-being of affected individuals and those close to them, as well as the future direction of practice, education, research, services, intervention, and treatment. This volume is primarily about caring for individuals and families who turn to professionals at a time when their lives are unmanageable alone, but is also concerned with the care that these professions extend to their own members. It contends that these issues are closely interrelated, with appropriate communication and support being key to both. Its chapters draw from a variety of theories and treatments to provide practical advice on the challenge of providing appropriate care tailored to a wide scope of individuals and families. The volumes in this series are designed to challenge concepts and stimulate debate, exploring all aspects of the development in treatment, intervention and care response, and the adoption of research-led best practice. They are essential reading for mental health and substance use professionals, students and educators.

*The Substance of Literature* Columbia University Press

Adolescent substance abuse is the nation's #1 public health problem. It originates out of a developmental era where experimentation with the world is increasingly taking place, and where major changes in physical self and social relationships are taking place. These changes cannot be understood by any one

discipline nor can they be described by focusing only on the behavioral and social problems of this age period, the characteristics of normal development, or the pharmacology and addictive potential of specific drugs. They require knowledge of the brain's systems of reward and control, genetics, psychopharmacology, personality, child development, psychopathology, family dynamics, peer group relationships, culture, social policy, and more. Drawing on the expertise of the leading researchers in this field, this Handbook provides the most comprehensive summarization of current knowledge about adolescent substance abuse. The Handbook is organized into eight sections covering the literature on the developmental context of this life period, the epidemiology of adolescent use and abuse, similarities and differences in use, addictive potential, and consequences of use for different drugs; etiology and course as characterized at different levels of mechanistic analysis ranging from the genetic and neural to the behavioural and social. Two sections cover the clinical ramifications of abuse, and prevention and intervention strategies to most effectively deal with these problems. The Handbook's last section addresses the role of social policy in framing the problem, in addressing it, and explores its potential role in alleviating it.

*Substance and Show and Other Lectures* Rowman & Littlefield 1917. From the Preface: I have called these lectures, given during the winter of 1916-17 in the Lowell Institute course in Boston, The Substance of Gothic, because in them an effort is made, though briefly and superficially, to deal with the development of Christian architecture from Charlemagne to Henry VIII, rather in relation to its substance than its accidents; to consider it as a definite and growing organism and as the exact and unescapable exponent of a system of life and thought antipodal to that of the modernism that began its final dissolution at the beginning of August A.D. 1914, rather than in the light of its accidents of form and ornament and details of structural design...

Substance Misuse and Young People: Critical Issues is a comprehensive source of information on young people's requirements for assessment, treatment and other interventions because of their misuse of substances. It highlights approaches that enhance understanding of the routes that lead young people to substance misuse and also the routes away from it. The emergence of new substances and methods of misuse makes this ever more relevant. The authors are international experts in the fields of psychiatry, paediatrics, medicine, psychology, genetics, resilience, neuropharmacology and epidemiology. This book acknowledges how widespread both substance misuse and psychiatric disorders are and explores the complex, challenging links between co-occurring conditions. Use of substances is associated with illness and premature mortality, and more so for people who have combined disorders. The authors critically assess the vital need for intervention during adolescence and early adulthood. They provide detailed clinical views of the psychosocial interventions and medications currently available and illustrate them with case studies that emphasise adolescents' experiences and thoughtful lifestyle-specific interventions. This book provides theoretical knowledge and indicates the practical skills that practitioners require for work with young people who misuse substances. It is highly applicable to medical practitioners, psychologists, pharmacists, social workers, police officers, probation officers, educationalists and related social and

healthcare professionals.

Given the prevalence of substance abuse in general clinical populations, it is important for healthcare providers to have knowledge and skill in the treatment of these problems. Evidence-Based Practice (EBP) involves the integration of the best evidence with clinical expertise and patient values. This text is designed as a bridge for practitioners that will provide up-to-date evidence reviews as well as information on how to best keep up with emerging trends in the field. The editors have gathered expert authors to provide a much needed summary of the current status of the evidence based practice for both the assessment and treatment of specific substance use disorders.

#### **Pharmacology and Treatment of Substance Abuse**

This book offers a sustained re-evaluation of the most central and perplexing themes of Leibniz's metaphysics. In contrast to traditional assessments that view the metaphysics in terms of its place among post-Cartesian theories of the world, Jan Cover and John O'Leary-Hawthorne examine the question of how the scholastic themes which were Leibniz's inheritance figure - and are refigured - in his mature account of substance and individuation. From this emerges a sometimes surprising assessment of Leibniz's views on modality, the Identity of Indiscernibles, form as an internal law, and the complete-concept doctrine. As a rigorous philosophical treatment of a still-influential mediary between scholastic and modern metaphysics, this study will be of interest to historians of philosophy and contemporary metaphysicians alike.
