Conceptual change research investigates the processes through which learners substantially revise prior knowledge and acquire new concepts. Tracing its heritage to paradigms and paradigm shifts made famous by Thomas Kuhn, conceptual change research focuses on understanding and explaining learning of the most difficult and counter-intuitive concepts. Now in its second edition, the International Handbook of Research on Conceptual Change provides a comprehensive review of the conceptual change movement and of the impressive research it has spawned on students' difficulties in learning. In thirty-one new and updated chapters, organized thematically and introduced by Stella Vosniadou, this volume brings together detailed discussions of key theoretical and methodological issues, the roots of conceptual change research, and mechanisms of conceptual change and learner characteristics. Combined with chapters that describe conceptual change research in the fields of physics, astronomy, biology, medicine and health, and history, this handbook presents writings on interdisciplinary topics written for researchers and students across

fields.

An illustrated guide to the most adventurous journey there is: Life. Human beings have long been addicted to maps: they tell us where we are, how we got where we are, and where we are going next. But The Atlas of Experience is no ordinary book of maps. While adhering to the conventions of

cartography, this atlas invites the traveler to follow routes through familiar-looking topography into hitherto uncharted realms of imagination, ideas, feelings and experience. Cradled by the Ocean of Possibilities, the Sea of Plenty and Still Waters, this strangely familiar place has its capital Boom, its airports Escape and Freedom. It encompasses beautiful regions like the Peninsular of Pleasure as well as desolate wastes such as the Swamps of Boredom and the Bay of Melancholy. Then again there are the well-known Mountains of Work and the Safe Harbour of Home. And what about the Volcanoes of Passion and the border towns of Challenge and Doubt? That's The Atlas of Experience the very special travel book that takes you on the long journey to where you are.

A new series of full-coverage resources developed for the AQA 2016 A/AS Level Geography specification. This full-colour Student Book covers all core and optional units for the AQA AS and A Level Geography specification for first teaching from September 2016. Students are encouraged to develop links between physical and human topics, understand systems, processes, and acquire geographical skills. Helping to bridge the gap from GCSE to A Level, it also provides support for fieldwork skills and for the geographical investigation at A Level. A 'Maths for geographers' feature helps students develop and apply their mathematical and statistical skills, and a range of assessment-style questions support students in developing their exam skills.

With reference to copious case studies, this book attempts to give a broad and comprehensive view of the multiplicity of forms taken by metaphor in physics. A diachronic presentation of the views hitherto advanced on the role of metaphor in the natural sciences provides an introduction to the crucial issues. By means of a broad definition of metaphor as a lexical, semantic, and conceptual phenomenon, metaphor is identified at various levels of physics discourse: in metatheory and methodology; in the sociology of the origin and evolution of science; in theory and conceptualization, including physics models; in education; and finally in linguistic expression, including terminology. Whereas historians and theoreticians of science reduce the question of metaphor in physics to the question of the role of scientific models, where one area of physics provides concepts and structures for another area, the perspective adopted here is that of cognitive semantics. The study inquires into the way in which concept-formation and terminology in physics avails itself of the metaphoric bent immanent in everyday language, conceptualizing abstract ideas in spatial terms, inanimate things as intelligent, measurable phenomena in terms of the visual. Attention is also given to the way in which metaphoric processes make it possible to integrate new knowledge into old and sometimes obsolete structures rather than eliminating those structures altogether.

"This book clearly outlines key concepts that all geographers should readily be able to explain. It does so in a highly accessible way. It is likely to be a text that my students will return to throughout their degree." - Dr Karen Parkhill, Bangor University "The editors have done a fantastic job. This second edition is really accessible to the student and provides the key literature in the key geographical terms of scale, space, time, place and landscape." - Dr Elias Symeonakis, Manchester Metropolitan University "An excellent introductory text for accessible overviews of key concepts across human and physical geography." - Professor Patrick Devine-Wright, Exeter University Including ten new chapters on nature, globalization, development and risk, and a new section on practicing geography, this is a completely revised and updated edition of the best-selling, standard student resource. Key Concepts in Geography explains the key terms - space, time, place, scale, landscape - that define the language of geography. It is unique in the reference literature as it provides in one volume concepts from both human geography and physical geography. Four introductory chapters on different intellectual traditions in geography situate and introduce the entries on the key concepts. Each entry then comprises a short definition, a summary of the principal arguments, a substantive 5,000-word discussion, the use of real-life examples, and annotated notes for further reading. Written in an accessible way by established figures in the discipline, the definitions provide thorough explanations of all the core concepts that undergraduates of geography must understand to complete their degree.

"An excellent world atlas. Very illuminating, good colours, clear texts...good glossary and, last but not least, up-to-date". Amazon customer review - The ideal school atlas for Key Stage 3 pupils and Scotland's National Qualifications., 11-14 years old - All updated for 2021-2022 specifically to meet curriculum needs - Specially focused 16-page UK and Ireland section - Comprehensive 62-page world section includes thematic maps on the environment, climate change, people, quality of life, and energy - Published in association with the Royal Geographical Society Philip's RGS Essential School Atlas has been specially created for lower-secondary geography students (11-14 year olds). The maps have been carefully designed to be uncluttered and easy to read, containing specially selected place names and detail. A clear set of symbols and scale information accompanies every map, with a useful introductory section covering basic atlas skills, including aerial photographs and satellite images to further explain particular features on the maps. Latitude and longitude co-ordinates are included in the index, alongside figure-letter references. Fully up-to-date, the atlas includes detailed regional maps, charts and satellite images of Europe, Italy, the Middle East, China, Japan, Kenya, USA, Brazil, and the Arctic and Antarctica. It also focuses on areas of special interest for students of geography, such as Japan's volcanoes and earthquakes, conservation in Kenya, and water supply in the USA. Philip's RGS Essential School Atlas is ideal for special project work and is available in both hardback and paperback editions.
