 A New York Times Notable Book of 2020 A Bloomberg Best Non-Fiction Book of 2020 A Behavioral Scientist Notable Book of 2020 A Human Behavior & Evolution Society Must-Read Popular Evolution Book of 2020 A bold, epic account of how the co-evolution of psychology and culture created the peculiar Western mind that has profoundly shaped the modern world. Perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich, and Democratic. If so, you're rather psychologically peculiar. Unlike much of the world today, and most people who have ever lived, WEIRD people are highly individualistic, self-obsessed, control-oriented, nonconformist, and analytical. They focus on themselves—their attributes, accomplishments, and aspirations—over their relationships and social roles. How did WEIRD populations become so psychologically distinct? What role did these psychological differences play in the industrial revolution and the global expansion of Europe during the last few centuries? In *The WEIRDest People in the World*, Joseph Henrich draws on cutting-edge research in anthropology, psychology, economics, and evolutionary biology to explore these questions and more. He illuminates the origins and evolution of family structures, marriage, and religion, and the profound impact these cultural transformations had on human psychology. Mapping these shifts through ancient history and late antiquity, Henrich reveals that the most fundamental institutions of kinship and marriage changed dramatically under pressure from the Roman Catholic Church. It was these changes that gave rise to the WEIRD psychology that would coevolve with impersonal markets, occupational specialization, and free competition—laying the foundation for the modern world. Provocative and engaging in both its broad scope and its surprising details, *The WEIRDest People in the World* explores how culture, institutions, and psychology shape one another, and explains what this means for both our most personal sense of who we are as individuals and also the large-scale social, political, and economic forces that drive human history. Includes black-and-white illustrations.

 Now in its second edition, *Pollution of Lakes and Rivers* provides essential insights into present-day water quality problems from an international perspective. Explains simply and effectively how lake sediments can be used to reconstruct pollution history Includes over 200 additional references and a new chapter on

recent climatic change and its effects on water quality and quantity Tackles present-day water quality problems from an international perspective Previously published by Hodder Arnold PowerPoint slides of the artwork from the book are available from: <http://post.queensu.ca/~pearl/textbook.htm> Reviews: "This is a very well-written and wide-ranging volume that is both instructive and topical. It is likely to prove useful as an introduction to the general area, a reference source and for teaching purposes." (*The Holocene*, November 2008) "If you thought that paleolimnology was just mud, pollen, and diatoms then you will likely be both struck by the complexity of this field of research and grateful that John Smol, FRSC, has described it so clearly and broadly. Simply put, the second edition is an excellent book." (*Journal of Phycology*, 2008) "This is a useful text. It provides a good level of detail so that the beginner in this area can appreciate what palaeolimnology can (and cannot) achieve. It goes beyond the simple introduction to provide a detailed understanding of how techniques can be applied ... This is a different take on the usual pollution text and would be of great use to those wishing to understand more from sedimentary records." Taken from the British Ecological Society's Teaching Ecology website "John Smol has extensive experience in this field of paleoenvironmental research which he combines well with his excellent written communication skills to produce a text that is easy to read but also thought provoking." (*Quaternary Science Reviews*, 2009) "The breadth of coverage in this text is impressive." (*Lake and Reservoir Management*, 2009) "If I could speak with fluidity and clarity in my lectures as consistently as John Smol writes my students would be very grateful." (*Journal of Paleolimnology*, 2009)

 QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming *Fly! Life Lessons from the Cockpit of QF32* On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. Winner of ABIA Awards for Best General Non-fiction Book of the Year 2013 and Indie Awards' Best Non-fiction 2012 Shortlisted ABIA Awards' Book of the Year 2013

"The Pilot Free Flight Atlas uses a JNC scale, includes topographical charts showing over 4,500 airports, Waypoints, VOR/DME, NDB's and special use airspace are included, plus it includes weather frequencies, points of interest, landmarks, airport-directory with ICAO-codes, railways, rivers, major highways, just to name a few. Airports are color coded by runway length and surface. International/ regional Aerodromes are coded by symbol shape. Pilots now have the ability to point out objects on the ground or know immediately where they are in relation to surrounding airports or points of interest: an all-in-one source of information for pre-flight or during flight. The new 4th edition of the Pilot Free Flight Atlas, published in October 2009, features: Completely new cartography; Completely new aeronautical data; New airport directory; New overview maps; New Captain's Corner; Expanded Coverage Area; 16 additional pages of cartography; 158 pages of map; 39 page Captain's Corner; 27 overview pages; 224 total pages. Complete Atlas is printed in color with ICAO-codes, waypoints, VOR's, NDB's, etc."--mypilotstore.com.

A pilot retires after 38 years from the world's largest oil company. He accepts a job in another country halfway around the world. His experience flying the cream of business jets is just what his new employer is looking for. He finds it necessary to adapt to his new environment and new associates. The new employer is General Arab Medical Service who supplies workers for the Saudi Arabian Military service. The job entails flying not only high ranking military, medical evacuation, but also members of the Royal Family. The missions are with a mixed crew of copilots, nurses/hostess, doctors, and engineers. Their nationalities are

from all over the world. You need to know that in aviation, the world language is English. The mixup due to language difficulties are mostly humorous, but in at least one case almost deadly. A young man from Texas can be surprised from what he finds the people and customs are in New York on his first visit. A young man from New York can find the people and customs in Texas as surprising. A friend and I were standing on a sidewalk looking in a show window in Wichita Falls, Texas when a lady got out of her car and approached us. "Young man can I ask you a question?" "Why yes Mam, what is it." She pointed at my feet, "Don't those things hurt you're feet?" She was asking about the boots I was wearing. "Why no Mam they don't" She turned with look of not understanding and went back to her car which I noticed was wearing Ohio license plates. That was in 1942 and I still remember what my friend and I talked about later. "You reckon that lady never saw cowboy boots before?" "I don't know. Maybe she never saw a horse before." So many years later the same fellow sees people and customs that are completely strange. They speak English, and eat with a knife and fork (most do) and they want to imitate the western world very much. Of course I'm speaking of those that I came in personal contact with. As a reader you must remember their country was only born in 1932. It had no means of entering seriously into world commerce until oil was discovered. Then suddenly they as a country became very rich almost over night. The King made decisions without the help of a Legislature. So, he decided where the money went. The Royal Family got an early cut and infrastructure was on the early list as well. If there was a need for a road, he just told some contractor to build the road, "And make it out of concrete. That asphalt stuff just melts and runs away over here in the desert." Well, if you have roads then you need cars, so the King calls Japan and says, "Send me over a boat load of those little pickups you make." "Well, ok your Highness. What color do you want." "I don't know, just mix them up, Ok?" The Japanese boat arrived and the King tried to give them to the Bedouins from the desert. The nomads only accepted the white ones, all other colors were sent back to Japan. Everyone know that dark colors are no good in the heat. Do you find that humorous? Well, I do. But what do you expect? A tall apartment building in downtown Riyadh is standing empty on the day of my arrival and on the day of my departure. The King had it

built for the Bedouins to use . . . for free. The occasion of celebrating the gift from the King, the Bedouins asked, "Where do we put our camels and goats?" "Well, you won't need them here." The gift was rejected straight-away (as the Brits say). Do you find that interesting? Well, I do. How about this. I asked one of my Saudi copilots, "What is your goal?" "What do you mean?" "I mean what are you working for. What do you hope for in the future?" "Oh, I see what you mean. Well, I'm saving my money to buy a camel and move out on the desert." "You mean you would leave your job in aviation, living in a house with indoor plumbing, electricity, and air conditioning to move into a tent in the desert?" "Sure, what's wrong with that?" Well, the time

Following the terrorist attacks of September 11, 2001, the Central Intelligence Agency embarked on a highly classified program of secret detention and extraordinary rendition of terrorist suspects. The program was designed to place detainee interrogations beyond the reach of law. Suspected terrorists were seized and secretly flown across national borders to be interrogated by foreign governments that used torture, or by the CIA itself in clandestine 'black sites' using torture techniques. This report is the most comprehensive account yet assembled of the human rights abuses associated with secret detention and extraordinary rendition operations. It details for the first time the number of known victims, and lists the foreign governments that participated in these operations. It shows that responsibility for the abuses lies not only with the United States but with dozens of foreign governments that were complicit. More than 10 years after the 2001 attacks, this report makes it unequivocally clear that the time has come for the United States and its partners to definitively repudiate these illegal practices and secure accountability for the associated human rights abuses.
